### ***DID YOU KNOW?***

Obese individuals have a 50 to 100 percent increased risk of death compared with normal-weight individuals. Most of the increased risk is due to cardiovascular causes. Overweight and obesity can shorten your life for 9 years.

Yearly more than 18 million workdays are lost through sickness due to overweight or obesity, and EU is spending from 2-8% of the health budget to resolve the obesity caused health problems ( in the USA more than 7 % of the health budget)

Obesity is not only health but a psychological, social, esthetic, economic problem etc

An estimated 70 percent of diabetes risk in the U.S. can be attributed to excess weight.

The prevalence of hypertension in adults who are obese is 41.9 percent for men and 37.8 percent for women.

Men waist sizes are set to increase to 101,6 cm by 2020. The current size is 99 cm, but many refuse to accept their waistline - 50% squeeze into trousers that are a size too small for them. Eating an extra 135 calories per day could result in gaining 7 kilos over a year. This is approximately equivalent to one slice of bread per day.

Obesity reaches epidemic sizes globally, with more than one billion obese adults. At the global level obesity with depression is the most common health disorder.

Successful weight loss depends on the permanent change in nutrition habits, energy intake and the intensity of body activity.

And last but not the least, all those data shows you the big possibilities if you invest in that market sector.
